SEM-15-060

Modification of the Trading & Settlement Code to Implement I-SEM

ESB welcomes the SEM committee's proposal to leverage existing governance structures to modify the Trading and Settlement Code (T&SC) for I-SEM by establishing T&SC working groups chaired by the RAs.

ESB will support this process and will provide resources and expertise to T&SC working groups as requested. ESB believes that the membership of these working groups should be opened widely to industry and that the process for nomination of expert members should not limit membership of the group.

While ESB understands that the process of completion of the detailed rules will take significant time and resources it requests that this time be kept as short as possible to allow the participants to implement changes to their processes and systems prior to market trials commencing.
